

Swisscom Certifies the following Sangoma Products for use with its Enterprise SIP Trunks: PBXact and Asterisk

Sangoma has completed the certification process with the Swisscom Enterprise SIP Trunk. Swisscom will now add Asterisk and PBXact as certified solutions to its compatibility list.

The SIP Trunk certification test is performed as part of the Enterprise SIP Swisscom service for PBX's, communications servers, and SBCs. It ensures that the telephony features work smoothly on the Swisscom network during the migration from TDM to SIP technology. The aim is to secure all functions between the manufacturer's communications systems and the public telephone network.

Versions tested: PBXact 14.0.xxxx based on asterisk 16.6.x

Customers who are connected to the Enterprise SIP Trunk can now simply select Sangoma products and the Swisscom system will automatically enable all required settings.

Why is this important?

- Asterisk is free of charge for the millions of customers using it as a PBX system. These users will now be able to easily connect with Swisscom services.
- Swisscom will now be able to support customers with the Sangoma PBX products Asterisk and PBXact.
